

JADHAO FALC

History

Founded in 1986, the **Jadhao Group** started by manufacturing premium quality cotton ginning and pressing machinery plants. Subsequently, the company started manufacturing a range of allied products related to the cotton ginning and pressing industry. With time, the company streamlined its many businesses into specific verticals. As a result of this exercise, the agricultural tractor implements business vertical unit named **Jadhao Layland** was formed in the year 2013.

Profile

Jadhao Layland prides itself on providing technologically advanced mechanized farming solutions to Indian farmers. These high-tech tractor-mounted solutions include:

- Rotary Tillers, called Rotavators
- Power Harrows
- Power Shredders
- Power Diggers

In 2013, thanks to the vision and efforts of our Managing Director Mr. Sanjay Jadhao, **Jadhao Layland** entered into a technical collaboration with **FALC S.r.l.**, a globally renowned Italian agricultural mechanization company. This collaboration led to the creation of the **JADHAO FALC** brand in India.

FALC is a name of repute for more than 60 years in mechanized farm implements and machine manufacturing business. Moreover, its state-of-the-art farming solutions are available in more than 50 countries today. With this collaboration, JADHAO FALC aims to manufacture and make available cutting-edge mechanized farming solutions to Indian farmers.

Manufacturing Capabilities

JADHAO FALC has independent research capabilities with evaluative and experimental tools. This ensures scale-up to commercial plants while meeting performance guarantees. The manufacturing infrastructure setup boasts of state-of-the-art machines from AMADA and MAKKEN, and is supported by PANASONIC Robotic Welding equipment. These high-end machines greatly automate the manufacturing process and ensure consistent production of high quality products.

In 2013, JADHAO FALC began manufacturing secondary Land-tilling Rotavators for the Indian agricultural market. These Rotavator models—ranging from 3 feet to 8 feet—were designed after extensive study of usage patterns. Feedback from farmers helped understand their specific requirements and was very useful while adapting products to specific farming conditions. The primary USP of JADHAO FALC Rotavators is ***Better Tillage with saving on Fuel & minimal load on the Tractor***. As a result, customers are able to realize the following advantages:

- High performance with low maintenance and ownership costs
- Maximum yields and increasing returns
- High acreage tillage with high quality soil pulverization and aeration in lesser time
- Lesser load on tractors leading to better engine performance and higher fuel efficiency
- Consistency in depth penetration due to optimum weight with stability on tilling ground
